The floor-level shower channel - new open space in the bathroom

**TECE:**  
intelligent housing  
technology

**“A TECEdrainline shower channel creates new open space in the bathroom”**

**A shower channel at last makes it possible to create a unified visual effect across the entire bathroom floor. Doing away with unnecessary enclosures creates new open space in the bathroom.**

There is now nothing to stop you enjoying a “borderless” shower - TECEdrainline’s high drainage capacity ensures that there is no risk of flooding, even with the down pour showers that are currently in trend.

### “Create clear emphases - with TECEdrainline patterned grates”

Six different patterns with different  
surfaces.

- Stainless steel, matt or bright
- Straight 700, 800, 900, 1000, 1200  
and 1500 mm lengths
- Special lengths and individual patterns  
can be supplied upon request.

## “Additional layout options - TECEdrainline angled channels ...”

Six different patterns with different  
surfaces.

- Stainless steel, matte or bright
- Angled 900, 1000, 1200  
and 1500 mm channels
- Special lengths and individual patterns  
can be supplied to suit.

Some examples of the wide range of  
uses for TECEdrainline shower channels:

## Tiled base or patterned grate?

The tiled base permits visual co-ordination with the tiled floor covering. (Illustration below left)

On the other hand, the six different patterned grates let you create different layout emphases. (Illustration below right)

Floor-level shower channel with "plate" tiled base

### TECEdrainline shower channel

Whether you choose a tiled base or a patterned grate, it will always rest on a TECEdrainline shower channel. The seal collar that is supplied ensures that your specialist will have no difficulty in ensuring a watertight installation. The low 90 mm construction depth means that it can also be installed in existing buildings.
